

## P R E F A C E

Owing to the disturbed condition prevailing in the North Eastern region, the Second Economic Census and the House Listing operations of the 1981 population census could be taken up only in September, 1980. Unlike the first Census (1977 Economic Census) which covered only establishments in the non-agricultural sectors, i.e. enterprises with at least one hired worker on a fairly regular basis, the Second Economic Census had wider scope and coverage as it covered both non-agricultural establishments and own-account enterprises (enterprises with no hired worker). The Second Economic Census also covered agricultural enterprises other than crop production and plantation. Information collected in the census were location of enterprises, nature of operation, type of ownership, social group of owner, power/fuel used for the activity and total number and number of hired persons usually working in the enterprise.

The report gives the findings of the Second Economic Census of the State of Meghalaya based on the final results. It is hoped that the data contained in the report would be found useful for planning and development and also for research workers.

I would like to place on record my appreciation to enumerators drawn locally such as school teachers, village level workers and the third grade Govt. Servants and the supervisors. I also place my thankfulness to the staff of the Directorate of Census Operations Meghalaya and the staff of this Directorate without whose guidance and supervision this difficult task would have been incomplete. Last but not least, I acknowledge with gratitude, the co-operation of the informants of various enterprises in making the difficult task a success.

Dated Shillong,  
the 5th January, 1985.

R.P. Kharmujai  
Director.

PART I

# Economic Census 1980

## Chapter - I

### Introduction

Eairly sound system of agricultural statistics has been built up through the nation-wide Agricultural Censuses conducted once in ten years. But in the non-agricultural sector of the economy like manufacturing, trade, transport and other services, the availability of statistics is not satisfactory except for the manufacturing establishments registered under Factory Act, 1948. Data regarding manufacturing establishments registered under Factory Act, 1948 are being collected regularly through the Annual Survey of Industries. For the non-factory units i.e. manufacturing establishments using power and employing less than 10 persons or those without power and employing less than 20 persons however, there is no regular collection of dependable statistics.

1.2 The lack of information in the un-organised sectors had led to neglect of developmental planning though these sectors were considered to be very important due to the fact that they accounted one-fourth of the national income and about one-fifth of the country labour force\*

1.3 Some attempt were made in the past to collect information on un-organised activities both by the Central Agencies and the States\*. Some of the efforts that need mentioning were - (i) Surveys conducted on household non-agricultural enterprises by the National Sample Survey Organisation (N.S.S.O.), (ii) Canvassing of establishments schedules in the 1971 population census, (iii) Census of unregistered industrial units carried out as a plan scheme in 1971-73 and (iv) the survey of Small Scale Industry conducted by the Ministry of Industries and Civil Supply.

1.4 The only attempt made in the State of Meghalaya to fill the data gap prior to the 1977 Economic Census was the survey conducted on household non-agricultural enterprises by the National Sample Survey Organisation in the 29th Round (1974-75). The survey, however, was confined only to self-employment in non-agricultural enterprises.

1.5 A nation-wide attempt to cover the data gap was made in 1977 through the 1977 Economic Census. In the 1977 Economic Census, non-agricultural establishments in the un-organised sector were identified\*. The basic data of structure, organisation, employment, output, etc. of those un-organised non-agricultural establishments were collected\*. Based on the information collected in the 1977 Economic Census, two follow-up surveys were conducted by the National Sample Surveys Orga-

nisation in the 33rd and 34th Rounds. In the 33rd Round, a detailed enquiry on non-directory manufacturing and repair services was conducted and in the 34th round a detailed study on non-directory manufacturing and repair services was done.

Need to repeat the Economic Census wider in scope and coverage:

1.6 As the 1977 Economic Census covered a large number of small units which were subject to high rate of mobility and mortality and variation in output and turnover, the censuses have to be repeated. The minimum interval best considered is five years. Though the data gap of the non-agricultural establishments in the un-organised sector had been filled to great extent, the 1977 Economic Census did not cover the non-agricultural own account enterprises which were more numerous and also contributed significantly to self-employment and national income. Though the listing of own-account enterprise was in the urban areas and in villages with more than 5000 population was done door to door, in the smaller villages, the Village Level List (V.L.L.) was canvassed and information regarding non-agricultural establishments was collected from headmen and any knowledgeable persons of the village. In the State of Meghalaya, villages with more than 5000 population were non-existent. Hence, a great number of own account enterprises could not be accounted for. Again, the 1977 Economic Census did not cover non-crop agricultural enterprises of which very little information was available. Hence the need for repeated censuses.

CHAPTER - II

Economic Census Programme and tabulation of data

Period of the Census - along with house listing operation of 1981 Population Census.

2.1 The Second Economic Census was normally due in 1982. However, as its operation included listing of addresses of enterprises through house-listing schedules, it was decided to conduct the Economic Census in 1980 along with the House-listing operation of the Population Census, 1981. From the point of view of economy and operational convenience, it was also considered best to hold the census along with House-Listing Operations. In most States of the country the Economic Census was taken up in April, 1980. In Meghalaya, the Economic Census could be taken up only in September 1980 owing to the circumstances prevailing in the North-Eastern Region, disturbed conditions being one. The period of the census was from 1st September, 1980 to 15th October 1980.

House list approach:

2.2 When an enterprise was identified in the house list schedule, items of information such as description of enterprise, classification of enterprise as to whether agricultural or non-agricultural, nature of operation, type of ownership, social group of owner, power/fuel used for the activity and number of persons usually working daily in the non-agricultural enterprise with males, females, total and also hired males, hired females were recorded in the Enterprise List. Information of number of persons usually working in the agricultural enterprise with total and hired were also collected.

Field agency for enumeration and supervision:

2.3 For the purpose of enumeration, part-time service of teachers of middle and primary schools, village level workers (Gram Sevaks) and third grade Government servants was utilised. In the rural areas school teachers and village level workers worked as enumerators and in the urban area third grade Government servants did the enumeration. In all, 1842 enumerators were engaged. For supervision, part-time services of officials of slightly senior levels were utilised. Each supervisor had to look after the work of approximately five enumerators, 374 supervisors were engaged. For the purpose of the census, the State of Meghalaya was divided into 47 charges, each under a charge-officer who was of a senior rank official. Charge Officers were overall supervisors of their respective charges. The five D.S.O's designated as Additional District Census officer were made overall in-charge for their respective district for the purpose of the Economic Census,

Release of quick result of the Census:

2.4 Arrangements were made for quick tabulation of important items in the Enterprise List by the enumerators themselves as part of the census operation. For this purpose, the Enterprise List Abstract was required to be filled up immediately after the field count by enumerators for the respective blocks; Aggregations at CD Block and District levels were done by the district statistical staff for the respective districts to provide district-wise provisional results of items such as total number of agricultural and non-agricultural enterprises, employment, total number of hired employment in those enterprises and selected characteristics of the enterprises. These results were further aggregated at the State headquarter in the Directorate of Economics, Statistics and Evaluation to arrive at the State results.

Preparation of summary statements:

2.5 Summary statements were prepared in the District Statistical Offices. For this purpose, one computer was temporarily appointed in each district. The statements were prepared by these computers under the direct supervision of the District Statistical Officer. Also, C.D. Blocks and town level statements were prepared for the respective district. These statements were sent to the Directorate of Economics, Statistics and Evaluation which were in turn sent to the Central Statistical Organisation, New Delhi.

Arrangements for computer processing of data:

2.6 Since Meghalaya did not have the computer facilities, processing of the Enterprise List data was done in the Computer Centre Department of Statistics, Government of India, New Delhi.

CHAPTER - III

RESULT AT A GLANCE

3.1 Number of enterprises and persons usually working in agricultural and non-agricultural sector.

Table 2.1 Number of enterprises and employment therein.

S. No.	Type of Enterprises	Rural	Urban	Total
1	2	3	4	5
<b>I. Agricultural activities other than crop production and plantation.</b>				
(a)	Total Enterprises	1834	629	2513
(i)	Own Account	1214	367	1581
(ii)	Establishments	670	262	932
(b)	Persons usually working in enterprises			
(i)	Total	5036	1636	6672
(ii)	Hired workers	1308	528	1836
<b>II. Non-agricultural Activities</b>				
(a)	Total Enterprises	18955	10902	29857
(i)	Own Account	7337	5612	12949
(ii)	Establishments	1163.8	5290	16908
(b)	Persons usually working in Enterprises			
(i)	Total	44235	57671	101906
(ii)	Hired workers	29264	45381	74645
<b>III. Agricultural and Non-agricultural combined</b>				
(a)	Total Enterprises	20839	11531	32370
(i)	Own Account	8551	5979	14530
(ii)	Establishments	12288	5552	17840
(b)	Persons usually working in enterprises			
(i)	Total	49271	59307	108578
(ii)	Hired workers	30572	45909	76481

.....6/-

Irs/

From table 3.1 of the Report it is seen that out of 32370 enterprises identified in the State, agricultural enterprises other than crop production and plantation constituted 7.76 percent only while non-agricultural enterprises constituted 92.24 percent. The percentage share of persons usually working in the Agricultural enterprises and non-agricultural enterprises was 6.15 and 93.85 respectively. In the case of agricultural activities, the number of own-account enterprises was more than that of the establishments but in the case of non-agricultural activities, the number of establishments was more than that of own-account enterprises. The percentage share of hired workers to persons usually working in the agricultural sector was 27.51 while that of the non-agricultural sector 73.25. In both agricultural and non-agricultural activities, the number of rural enterprises was more than that of urban enterprises.

3.2 Inter-district comparison on concentration of enterprises in respect of population.

Table 2.2 Number of enterprises per 1000 population by district  
(Population as per 1981 Census)

Sl. No.	District	Number of enterprises per 1000 population		
		RURAL	URBAN	TOTAL
1	2	3	4	5
1.	Jaintia Hills	22	55	25
2.	East Khasi Hills	19	48	29
3.	West Khasi Hills	16	75	17
4.	East Garo Hills	22	46	23
5.	West Garo Hills	18	44	21
S T A T E		19	48	24

In the rural areas, the number of enterprises per 1000 population was highest in the Jaintia Hills and East Garo Hills because the rural population of the two districts was relatively less than in the remaining districts, The West Khasi Hills district had the lowest number of rural enterprises per 1000 population as it had the lowest number of rural enterprises, In the case of urban areas West Khasi Hills had the highest number of enterprises per 1000 population because its urban population was only 3880 though the number of urban enterprises was only 282, This has a reference to table 3.7 of the report.

3.3 Inter-district comparison of concentration of enterprises with respect to area-

Table 2.3 Number of enterprises per 10 Sq. Km. by district.

Sl. No.	District	Number of enterprises per 10 Sq. Km.		
		RURAL	URBAN	TOTAL
1.	2.	3.	4.	5.
1.	Jaintia Hills	8	889	10
2.	East Khasi Hills	12	208	29
3.	West Khasi Hills	5	243	5
4.	East Garo Hills	11	394	12
5.	West Garo Hills	11	639	14
S T A T E		9	1357	14

Table 3.8 reveals that the East Khasi Hills district had the highest number of rural enterprises per 10 Sq. Km. followed by East Garo Hills and West Garo Hills. In the urban area East Khasi Hills also ranks first\* Though the number of urban enterprises of Jaintia Hills was much less than that of West Garo Hills yet it ranks second as its urban area is less than one-third that of West Garo Hills.

3.4 Comparison between State final result and All-India Provisional results of 1980 Economic Census\*

Meghalaya being a very small and young State of India, the number of enterprises is also very small compared to that of the All India- Table 3.9 shows that the percentage share of Meghalaya to All India in respect of agricultural enterprises other than crop production and plantation was 0.17. In the case of non-agricultural enterprises the percentage share of Meghalaya to All India was 0.18. The combine percentage share was 0.18. The percentage share of persons usually working in the agricultural enterprises was 0.23 and that of hired workers 0.25. The percentage share of persons usually working in non-agricultural enterprises was 0.21 and that of hired workers was 0.27. Its share of persons usually working in agricultural and non-agricultural combined in the All India figure was 0.21 and that of hired workers 0.27.

3.5 Results of 1977 Economic Census and of 1980 Economic Census in respect of non-agricultural establishments.

Table 2.4 Number of Non-agricultural establishment &amp; persons usually working as in 1977 Economic Census &amp; 1980 Economic Census.

I t e m s	1977	1980	Percentage
	1.	2.	3.
1. Establishments Total.	5049	16908	234.88
2. Seasonal establishments	177	305	72.32
3. Establishments without premises	290	1598	451.03
4. Establishments with power/fuel	1415	2338	65.23
5. Co-operative Establishments	35	224	540.00
6. Public Establishments	1137	8224	623.31
7. Establishments owned by Scheduled Tribe.	2032	3527	73.57
8. Establishments owned by Scheduled Caste.	218	415	90.37
9. Persons usually working	21957	82535	275.89
10. Hired workers	18121	74645	311.93

The increase in the number of establishments between the period of the two censuses as seen in Tables 2.4 and 3.10 was to the tune of 235 percent. This tremendous increase in the number of establishments may be ascribed to the following: (a) In the 1977 Economic Census, complete enumeration was not done in the village with less than 5000 population. The village level List Approach was instead adopted. In this approach the enumerator sought information about the establishments in the village from knowledgeable person/persons such as headman, local committee Secretary, etc. This method adopted in the 1977 Economic Census had apparently resulted in under-enumeration of establishments in the rural areas as multi-establishments house holds were counted mostly only once. In Meghalaya, villages with more than 5000 population were negligible in number. But in the 1980 Economic Census, complete enumeration was done in all villages irrespective of their population. This was one of the reasons of the increase in the number of establishments in the rural areas because the chances of under-enumeration was much less in the complete enumeration approach.

(b) Two new districts were set up in the State just before the 1977 Economic Census and many sub-divisions and administrative units were set up after the 1977 Economic Census. As a result, many establishments were set up in these district head-quarters, sub-divisions and administrative head-quarters only after the 1977 Economic Census. This was another reason for the increase of establishments in the 1980 Economic Census over that of the 1977 Census.

(c) A huge deposit of coal was discovered in the Jaintia hills District of the State of Meghalaya scattering over a number of areas, These quarries started working just after the-1977 Economic Census - thus leading to increase of mining and quarrying establishments after the 1977 Economic Census. side by side, many other activities like retail trade, hotels and restaurants, transports, repair services, construction sprung up in these areas,

These three reasons together mainly accounted for the tremendous increase of establishments in the 1980 Economic Census over the 1977 Economic Census.

CHAPTER - IV

Principal Characteristics of agricultural enterprises

4.1 The total number of agricultural enterprises as identified in the Census was 2533, of this number, 1581 were own-account enterprises and 932 establishments. Persons usually working in agricultural enterprises were 6672 of whom 1836 were hired workers.

District-wise distribution of agricultural own-account enterprises and persons usually working.

4.2 From the table below it is seen that the highest concentration of own-account agricultural enterprises and persons usually working therein was in the East Khasi Hills district.

Table 2.5 Number of agricultural own-account enterprises & persons usually working.

Sl. No.	District	Number of agricultural own-account enterprises	Persons usually working
1	2	3	4
1.	Jaintia Hills	146	306
2.	East Khasi Hills	852	1953
3.	West Khasi Hills	105	206
4.	East Garo Hills	229	527
5.	West Garo Hills	249	549
S T A T E		1581	3541

4.3 The total number of persons usually working in agricultural establishments as given in table 4.5.3 was 3131 of which 1836 were hired workers. The percentage share of hired workers to total persons usually working as given in table 4.6 was 58.64. The percentage share of urban workers to total workers was only 28.74 (Table 4.4). Of the 1581 agricultural own-account enterprises as seen in table 4.7.3 254 were operated seasonally and 304 without premises. 598 enterprises were owned by Scheduled Tribe and 53 by Scheduled Castes. Those with power/fuel were 54 in number.

4.4 Table 4.8.3 shows that out of the 332 agricultural establishments identified in the state, 97 were operated seasonally and 155 were without premises. 3 agricultural establishments were co-operative establishment and 122 public establishments. Those owned by Scheduled Tribe and Scheduled Castes were 218 and 23 in number respectively. Agricultural establishments with power/fuel were 21 in number.

4.5 The total number agricultural private establishments was 807 and the total number of persons usually working in these establishments was 2731. Of the total private establishments, 75 were operated seasonally and 153 without premises, 218 of the establishments were owned by Scheduled Tribe and 29 by Scheduled Caste. 16 establishments were operated with power/fuel.

4.6 Only 3 agricultural co-operative establishments were identified, All of them were perennial. and with premises, These co-operative establishments employed 10 workers only, All of them were without power/fuel.

.....12/-

CHAPTER - V

Principal Characteristics of non-agricultural enterprises.

5.1 The total number of non-agricultural enterprises as identified in the Census was 29857 with 191906 persons usually working in them. Of the total non-agricultural enterprises, 12949 were own-account enterprises and 16908 were establishments.

Total persons employed in own-account enterprises and establishments by Major activity groups.

5.2 Table 2.6 shows that the highest concentration of persons usually working in non-agricultural own-account enterprises was in whole sale and retail trade with 53.16 percent of the total employment in non-agricultural own-account enterprises followed by manufacturing and repair services with 23.44 percent. The highest concentration of persons usually working in respect of non-agricultural establishments was in Community, Social and Personal Services with 57.61 percent of the total number persons usually working in non-agricultural establishments.

Table 2.6 Number of persons usually working in non-agricultural own-account enterprises and non-agricultural establishments by major activity groups,

Sl. No.	Major activity group	(Number of persons usually working in non-agricultural own-account enterprises)	(Number of persons usually working in non-agricultural establishments)
1	2	3	4
1.	Mining and Quarrying	56	1810
2.	Manufacturing and Repair services	4541	7717
3.	Electricity, Gas & Water	-	386
4.	Construction	168	6981
5.	(A) Wholesale & Retail Trade	10297	7773
	(B) Restaurants & Hotels	2799	5277
6.	(A) Transport	131	1185
	(B) Storage & Ware-housing	433	885
	(C) Communications	-	1450
7.	Financing, insurance, real estate and business services	93	1525
8.	Community, Social and Personal Services	853	47546
9.	Others	-	-
	<b>All Activities</b>	<b>19371</b>	<b>82535</b>

Number of Non-agricultural own-account enterprises by district in all activities.

5.3 From the table 2.7 it is seen that the highest concentration of rural non-agricultural own-account enterprises was in the West Garo Hills district followed by East Khasi Hills district with percentage share of 32.79 and 31.61 respectively. In the urban areas, the highest concentration of non-agricultural own-account enterprises was in the East Khasi Hills district with a percentage share of 72.56. The two new districts, namely, the West Khasi Hills and the East Garo Hills had the lowest percentage share.

Table No. 27 Number of non-agricultural own-account enterprises by district in all activities.

No.	District	Rural		Urban		Total	
		Number	P.C.	Number	P.C.	Number	P.C.
1	2	3	4	5	6	7	8
1.	Jaintia Hills	1122	15.29	318	5.67	1440	11.12
2.	East Khasi Hills	2319	31.61	4072	72.56	6391	49.36
3.	West Khasi Hills	649	8.85	168	2.99	817	6.31

5.28 No establishment under major activity group "Others" was identified in the State of Meghalaya.

CHAPTER - VI

Principal characteristics of agricultural enterprises by size class of total employment.

Number of agricultural own-account enterprises by size class of total employment.

6.1 The highest number of agricultural own-account enterprises as revealed in table 6.1 we& in the employment size class, of 1-2. They constituted 73.05 percent of the total agricultural own-account enterprises of the State. Next comes agricultural own-account enterprises with employment size class 3 constituting 13.41 percent. Agricultural Own-account enterprises with employment size class of 10 or more are 13 in number constituting only 0.82 percent of the total. In the rural areas own-account enterprises of employment size class 1-2, are maximum in number. They constituted 71.00 percent of the rural total. Next came employment size class of 3 with 14.17 percent. In the case of urban concentration, own-account enterprises of employment size class 1-2 are highest in number with 79.84 percent of the urban total.

Number of agricultural establishments by employment size class

6.2 Of the total size classes, establishments of 1-2 employment size class are highest in number with 42.49 percent followed by size class 3 with 28.22 percent. The distribution of other size classes are as follows: size class 4 with 12.90 percent, 5 with 6.33 percent, 6 to 9 with 6.87 percent, 10 to 19 with 2.57 percent and 20 to 49 with 0.54 percent. No establishment in the range of 50-99, 100-199, 200-299 and 500 or more was identified in the State during the census. In the rural areas, establishments of employment size class 1-2 are highest in number with 44.03 percent of the rural total followed by size 3 with 27.76 percent. In the case of urban areas, establishments in employment size class 1-2 were highest in number with 38.55 percent of urban total. Size class 3 ranked second with 29.39 percent. Urban distribution of other employment size classes were as follows - size class 4 with 14.12 percent, size class 5 with 8.78 percent, size class 6-9 with 7.25 percent, size class 10 to 19 with 1.15 percent and size class 20 to 49 with 0.76 percent. No agricultural establishment of size class 50 and above was identified in the State. Table 6.2 gives the distribution of agricultural establishments by employment size class.

Inter district comparisons of agricultural own-account enterprises by size class of total Employment.

63 For all the size classes, the Past Khasi Hills district ranked first with 53.85 percent of size class 1-2, 53.77 percent of size class 3, 50.55 percent of size class 4, 60 percent of size class 5, 55.71 percent of size class 6-9 and 53.85 percent of size class 10 or more. The East Garo Hills district ranked second in size classes 1-2, 6-9 and 10 or more with 15.15 percent, 21.43 percent and 38.46 percent respectively while the West Garo Hills district claimed second in size classes 3, 4 and 5 with 17.92 percent, 23.08 percent, and 22.50 percent respectively. Agricultural enterprise of size class 5 was not found in the West Khasi Hills district while that of size class 10 or more was not found in the Jaintia Hills district and the West Khasi Hills district. Except for the East Khasi Hills district, no urban enterprise of size classes 3, 5 and 10 or more was identified in the other districts. The East Garo Hills district had no urban enterprise of any size class. District-wise distribution of agricultural-own-account enterprises by employment size group is given in table 2.6.

Inter district comparison of agricultural establishment by size class of total employment\*

6.4 Except for the size class 20-49 overtaken by the East Garo Hills district, the East Khasi Hills district ranked first in all size classes with 38.33 percent, 59.70 percent, 50.20 percent, 54.24 percent, 48.44 percent and 50 percent of, size class 1-2, 3, 4, 5, 6-9 and 10-19 respectively as seen in table 6.4.3. Agricultural establishment above size class 50 was not identified in the State. In the rural areas, the highest number of agricultural establishments of size classes 1-2, 3, 4 and 10-19 was in the East Khasi Hills district while the East Garo Hills district claimed first in Size classes 5, 6-9 and 20-49 as seen in table 6.4.1. As regard urban concentration of agricultural establishments, the East Khasi Hills district ranked first in all size classes except size class 20-49 which was equally shared by the West Garo Hills and East Khasi Hills district. No urban agricultural establishments of size classes 4, 6-9, 10-19 and 20-49 was identified in the Jaintia Hills district. Urban distribution of agricultural establishments by employment size group and by district is given in table 6.4.2.

Selected characteristics of agricultural own-account enterprises by size class of total employment.

6.5 The highest number of seasonal own-account enterprises as seen in table 2.27 was in size class 1-2 constituting 75.98 percent of the total seasonal own-account enterprises followed by size class 3 with 12.60 percent. of enterprises without premises, the highest number was in size class 1-2 with 75.33 percent of the total own-account enterprises without premises followed by size class 3 with 15.13 percent. The highest number of enterprises owned by Scheduled Tribes and Scheduled Castes was of the size class 1-2 with 80.43 percent and 84.91 percent of the total own-account enterprises owned by Scheduled Tribes and Scheduled Castes respectively. The highest of those with power/fuel was also in, size class 1-2.

Table No. 2.27 Distribution of agricultural own-account enterprises with selected characteristics by employment size class.

Discussion on enterprises with selected characteristic in respect of non-agricultural own-account enterprises by size class of total employment.

7.9 The highest number of seasonal own-account enterprises was in size class 1-2 constituting 90.30 percent of the total, number of seasonal own-account enterprises followed by size class 3 with 6.93 percent. There was no seasonal own-account enterprise of size class 10 or more. Of the own-account enterprises without premises, the greatest number was in size class 1-2 with 95.23 percent; of the total own-account enterprises without premises followed by size class 3. The highest number of own-account enterprises owned by Scheduled Tribe and Scheduled Caste and also those with power/fuel was also in size class 1-2. Distribution of non-agricultural own-account enterprises with selected characteristics by employment size class is given in table 7.9.1 for rural, table 7.9.2 for urban and table 7.9.3 for combined.

Discussion on enterprises with selected characteristics in respect of non-agricultural establishments by size class of total employment.

7.10 The highest number of seasonal establishments was of size class 1-2 with 52.79 percent of the total seasonal enterprises followed by size class 3 with 13.77 percent. There was no Seasonal establishment of size classes 100-199, 200-499 and 500 or more. In the case of establishments without premises size class 1-2 came first with 25.47 percent of the total establishments without premises; size class 6-9 ranked second with 21.84 percent followed by size class 10-19 with 15.27 percent. There was no establishment without premises in the size classes 200-499 and 500 or more. In the case of co-operative establishments, the highest number was also of size class 1-2 with 61.16 percent of the total co-operative establishments followed by size class 3. The highest number of public establishments was also in size class 1-2 with 61.39 percent of the total public establishments. Size class 1-2 had the highest number accounting for 40.40 percent of establishments owned by scheduled tribe and 41.93 percent of those owned by scheduled caste. Selected characteristics of non-agricultural establishment by employment size class is given in table 7.10.13.

ANNEXURE - I

Concepts and definitions of certain terms used during the census.

Enterprise:

An enterprise is an undertaking engaged in production and/or distribution of good and/or series not for the sole purpose of own consumption. The workers in an enterprise may consist of members of the household or hired workers or both.

Agricultural Enterprise:

The agricultural enterprise is one engaged in livestock production, agricultural series, hunting trapping and game propagation, forestry and logging. Enterprises engaged in activities pertaining to agricultural production and plantation were not covered under the Economic Census,

Non-Agricultural Enterprises:

Enterprises engaged in activities other than those mentioned above are term as non-agricultural enterprises.

Own-account Enterprises:

An own-account enterprise is an enterprise with no hired worker.

Establishment:

An establishment is an enterprise having at least one hired worker on a fairly regular basis, It is further classified into Directory Establishment and Non-Directory Establishment,

Directory Establishment:

A directory establishment is an establishment employing six or more workers with at least one hired worker.

Non-Directory Establishment:

A non-directory establishment is an establishment employing less than six workers with at least one hired worker.
